AUDIT SISTEM INFORMASI

MINGGU KE-4

Copyright © March 2026

POKOK BAHASAN

- **Understand the Enterprise Context and Strategy**
  Memahami Konteks dan Strategi Perusahaan
- **Determine the Initial Scope of the Governance System**
  Menentukan Lingkup Awal Sistem Tata Kelola
- **Refine the Scope of the Governance System**
  Memperbaiki Lingkup Sistem Tata Kelola
- **Conclude the governance system design**
  Menyimpulkan desain sistem tata kelola

Copyright © March 2026

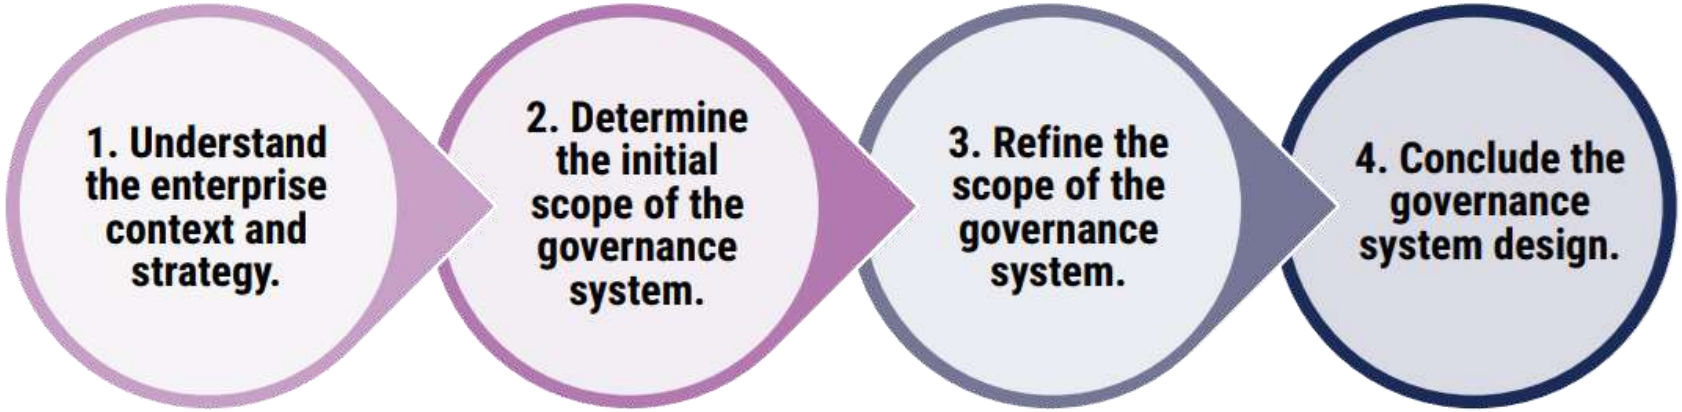

Governance System Design Workflow

COBIT® 2019 mengunakan 4 tahap/Langkah dalam *Governance System Design Workflow* nya (lihat gambar pada slide berikutnya).

Perbedaaan berbagai tahapan dan langkah dalam proses desain yang digunakan akan menghasilkan rekomendasi tabel pemetaan yang berbeda untuk memprioritaskan tujuan tata kelola dan manajemen atau komponen sistem tata kelola terkait.

Copyright © March 2026

Governance System Design Workflow

- 1.1 Understand enterprise strategy.
- 1.2 Understand enterprise goals.
- 1.3 Understand the risk profile.
- 1.4 Understand current I&T-related issues.

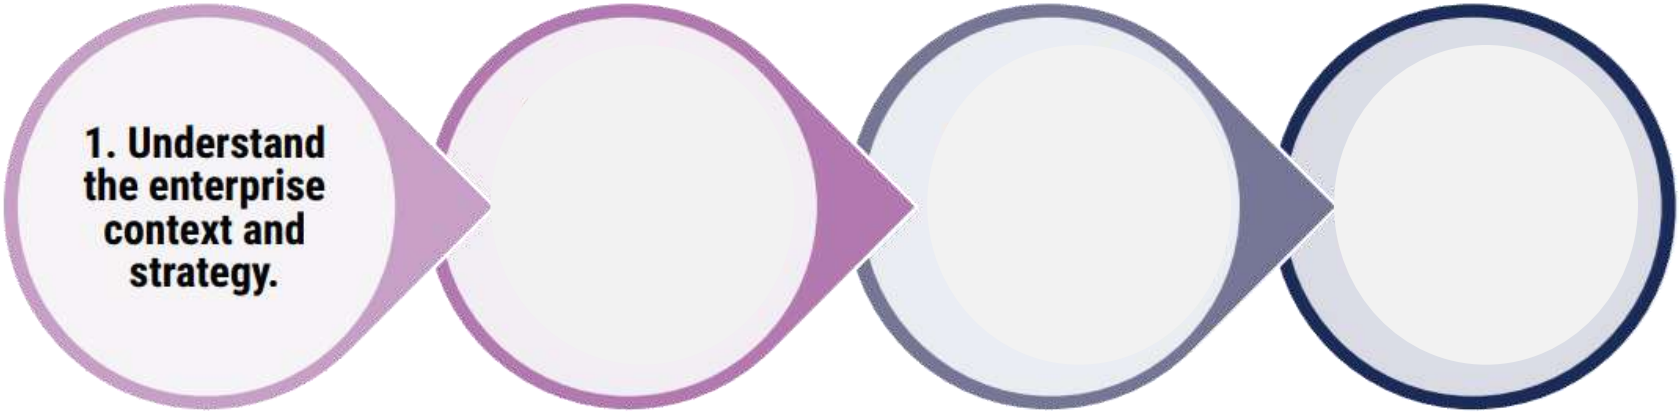

- 2.1 Consider enterprise strategy.
- 2.2 Consider enterprise goals and apply the COBIT goals cascade.
- 2.3 Consider the risk profile of the enterprise.
- 2.4 Consider current I&T-related issues.

- 3.1 Consider the threat landscape.
- 3.2 Consider compliance requirements.
- 3.3 Consider the role of IT.
- 3.4 Consider the sourcing model.
- 3.5 Consider IT implementation methods.
- 3.6 Consider the IT adoption strategy.
- 3.7 Consider enterprise size.

- 4.1 Resolve inherent priority conflicts.
- 4.2 Conclude the governance system design.

Setiap tahap/Langkah dari gambar di atas akan dijelaskan pada slide-slide selanjutnya.

Copyright © March 2026

Understand the Enterprise Context and Strategy

Memahami Konteks dan Strategi Perusahaan

Copyright © March 2026

1. Understand the Enterprise Context and Strategy

Pada langkah pertama, Perusahaan/kita memeriksa atau menentukan konteks, strategi, dan lingkungan bisnisnya.

Hal ini untuk mencapai pemahaman yang jelas di empat domain yang sebagian tumpang tindih, saling bergantung, dan seringkali saling melengkapi.

Domain yang perlu diperiksa:

- *Enterprise strategy*
- *Enterprise goals and resulting alignment goals*
- *I&T risk profile*
- *Current I&T-related issues*

Copyright © March 2026

1.1 Enterprise strategy

Perusahaan harus menentukan strategi perusahaan mana yang paling sesuai.

Panduan strategi perusahaan didefinisikan dalam desain factor 2 - **Enterprise goals** item 1 (BSC Dimensions - lihat materi minggu ke-3).

BSC dimension	Ref.	Enterprise Goal
Financial	EG01	Portfolio of competitive products and services
	EG02	Managed business risk
	EG03	Compliance with external laws and regulations
	EG04	Quality of financial information
Customer	EG05	Customer-oriented service culture
	EG06	Business-service continuity and availability
	EG07	Quality of management information
Internal	EG08	Optimization of internal business process functionality
	EG09	Optimization of business process costs
	EG10	Staff skills, motivation and productivity
	EG11	Compliance with internal policies
Learning and Growth	EG12	Managed digital transformation programs
	EG13	Product and business innovation

Copyright © March 2026

1.2 Enterprise Goal

Strategi perusahaan diwujudkan melalui pencapaian sekumpulan *enterprise goal*. COBIT mendefinisikan 13 *enterprise goal* yang disesuaikan dengan strategi perusahaan yang dipilih.

Daftar tujuan perusahaan didefinisikan dalam desain factor 2 - **Enterprise goals** item 2 (Enterprise Goal - lihat materi minggu ke-3).

BSC dimension	Ref.	Enterprise Goal
Financial	EG01	Portfolio of competitive products and services
	EG02	Managed business risk
	EG03	Compliance with external laws and regulations
	EG04	Quality of financial information
Customer	EG05	Customer-oriented service culture
	EG06	Business-service continuity and availability
	EG07	Quality of management information
Internal	EG08	Optimization of internal business process functionality
	EG09	Optimization of business process costs
	EG10	Staff skills, motivation and productivity
	EG11	Compliance with internal policies
Learning and Growth	EG12	Managed digital transformation programs
	EG13	Product and business innovation

Copyright © March 2026

Untuk menerjemahkan prioritas enterprise goal ke dalam tata kelola dan manajemen, kita harus membuat pilihan yang jelas saat memilihnya.

Disarankan untuk mengidentifikasi hanya beberapa tujuan utama dari *enterprise goal*. Ketika semua *enterprise goal* diberi prioritas yang sama pentingnya, ini akan membuat penentuan prioritas menjadi sulit.

Copyright © March 2026

1.3 Risk Profile

Masukan penting lainnya untuk desain sistem tata kelola adalah dengan memahami profil risiko perusahaan—yaitu, memahami skenario risiko mana yang dapat memengaruhi perusahaan, dan bagaimana menilai dampak dan kemungkinan akibat yang akan terjadi. Untuk mencapai pemahaman ini, perlu dilakukan analisis risiko tingkat tinggi.

Panduan Identifikasi skenario risiko yang relevan dapat dilihat di *Desain factor* 3 – **Risk Profile Design** (lihat materi minggu ke-3).

Reference	Risk Category	Example Risk Scenarios
1	IT-investment decision making, portfolio definition and maintenance	A. Programs selected for implementation misaligned with corporate strategy and priorities B. Failure of IT-related Investments to support digital strategy of the enterprise C. Selection of wrong software (in terms of cost, performance, features, compatibility, redundancy, etc.) for acquisition and implementation D. Selection of wrong infrastructure (in terms of cost, performance, features, compatibility, etc.) for implementation E. Duplication or important overlaps between different investment initiatives F. Long-term incompatibility between new investment programs and enterprise architecture G. Misallocation, inefficient management and/or competition for resources without alignment to business priorities
2	Program and projects lifecycle management	A. Failure of senior management to terminate failing projects (due to cost explosion, excessive delays, scope creep, changed business priorities) B. Budget overruns for I&T projects C. Lack of quality of I&T projects D. Late delivery of I&T projects E. Failure of third-party outsourcers to deliver projects as per contractual agreements (any combination of exceeded budgets, quality problems, missing functionality, late delivery)
3	IT cost and oversight	A. Extensive dependency on, and use of, user-created, user-defined, user-maintained applications and *ad hoc* solutions B. Excess cost and/or ineffectiveness of I&T-related purchases outside of the I&T procurement process C. Inadequate requirements leading to ineffective Service Level Agreements (SLAs) D. Lack of funds for I&T related investments
4	IT expertise, skills and behavior	A. Lack or mismatch of IT-related skills within IT (e.g., due to new technologies or working methods)
		F. Rising water table leaving critical location unusable G. Rising temperature rendering critical locations uneconomical to operate
17	Technology-based innovation	A. Failure to identify new and important technology trends B. Failure to appreciate the value and potential of new technologies C. Failure to adopt and exploit new technologies in a timely manner (functionality, process optimization, etc.) D. Failure to provide technology support new business models
18	Environmental	A. Environmentally unfriendly equipment (e.g., power consumption, packaging)
19	Data and information management	A. Discovery of sensitive information by unauthorized persons due to inefficient retaining/archiving/disposing of information B. Intentional illicit or malicious modification of data C. Unauthorized disclosure of sensitive information through email or social media D. Loss of IP and/or leakage of competitive information

Copyright © March 2026

1.4 Current I&T-Related Issues

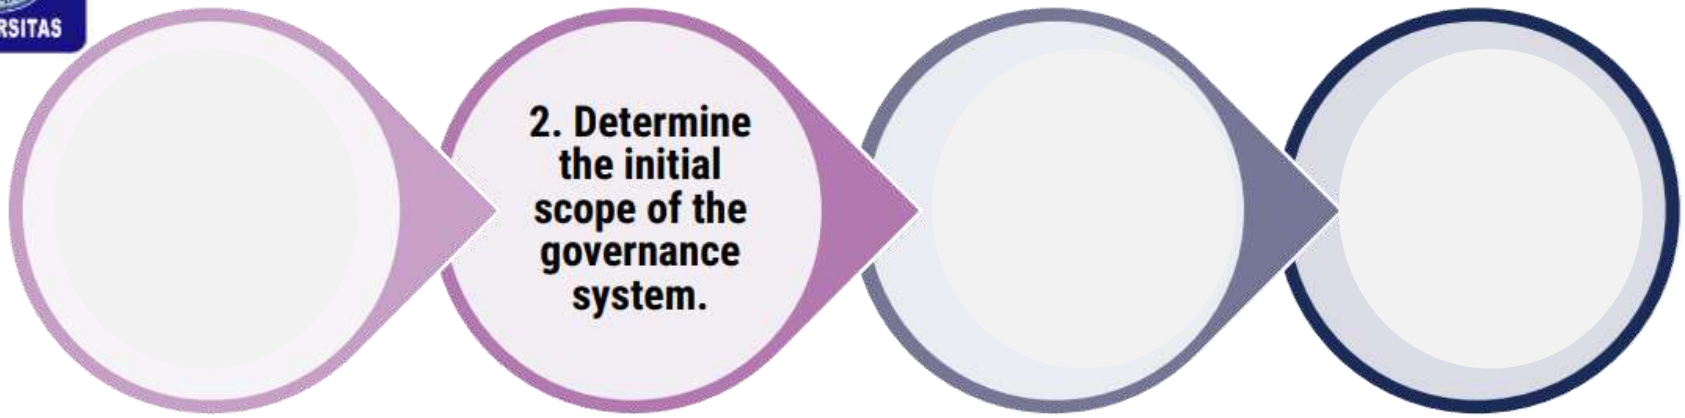

Current I&T-Related Issues adalah masalah terkait TI—juga disebut titik permasalahan—yang dialami oleh perusahaan.

Masalah TI harus dapat diidentifikasi atau dilaporkan melalui manajemen risiko, audit, manajemen senior, atau oleh pemangku kepentingan eksternal.

Panduan strategi perusahaan didefinisikan dapat dilihat di *Desain factor* 3 – **Risk Profile Design** (lihat materi minggu ke-3).

Reference	Description
A	Frustration between different IT entities across the organization because of a perception of low contribution to business value
B	Frustration between business departments (i.e., the IT customer) and the IT department because of failed initiatives or a perception of low contribution to business value
C	Significant IT related incidents, such as data loss, security breaches, project failure, application errors, etc. linked to IT
D	Service delivery problems by the IT outsourcer(s)
E	Failures to meet IT related regulatory or contractual requirements
F	Regular audit findings or other assessment reports about poor IT performance or reported IT quality or service problems
G	Substantial hidden and rogue IT spending, that is, IT spending by user departments outside the control of the normal IT investment decision mechanisms and approved budgets
H	Duplications or overlaps between various initiatives or other forms of wasting resources
I	Insufficient IT resources, staff with inadequate skills or staff burnout/dissatisfaction
J	IT-enabled changes or projects frequently failing to meet business needs and delivered late or over budget
K	Reluctance by board members, executives or senior management to engage with IT, or lack of committed business sponsors for IT
L	Complex IT operating model and/or unclear decision mechanisms for IT-related decisions
M	Excessively high cost of IT
N	Obstructed or failed implementations of new initiatives or innovations caused by the current IT architecture and system
O	Gap between business and technical knowledge which leads to business users and IT and/or technology specialists speaking different languages
P	Regular issues with data quality and integration of data across various sources
Q	High level of end-user computing, creating (among other problems) a lack of oversight and quality control over the applications that are being developed and put in operation
R	Business departments implementing their own information solutions with little or no involvement of the enterprise IT department [8]
S	Ignorance and/or noncompliance with security and privacy regulations
T	Inability to exploit new technologies or to innovate using I&T

Determine the Initial Scope of the Governance System

Menentukan Lingkup Awal Sistem Tata Kelola

Copyright © March 2026

2. Determine the Initial Scope of the Governance System

Langkah 2 menyajikan sejumlah faktor desain yang relevan dan nilai deskriptif terkait, yang pemilihannya akan mendorong prioritas tujuan *Governance and Management*.

Ada dua opsi dasar untuk penilaian ini: pendekatan **kualitatif** dan pendekatan yang lebih **kuantitatif**.

Pendekatan **kualitatif** mempertimbangkan tujuan *Governance and Management* yang paling relevan untuk nilai setiap *design factor*. Setelah langkah desain awal dan penyempurnaan, keputusan kualitatif dibuat terkait prioritas tujuan *Governance and Management*.

Pendekatan yang lebih **kuantitatif** melibatkan tabel pemetaan numerik yang dibuat untuk setiap *design factor*. Tabel pemetaan mengkuantifikasi nilai deskriptif yang terkait dengan setiap design factor, untuk menunjukkan korelasinya dengan tujuan *Governance and Management*.

Copyright © March 2026

2.1 Consider Enterprise Strategy (Design Factor 1)

Gambar berikut berisi prioritas Governance and Management, dan komponen-komponennya untuk setiap prioritas archetype (*Design Factor Value*) Perusahaan.

Design Factor Value	Governance and Management Objectives Priority	Components
Growth/acquisition	Important management objectives[15] include: • APO02, APO03, APO05 • BAI01, BAI05, BAI11	Important components: • Organizational structures ▪ Support the portfolio management role with an investment office ▪ Enterprise architect • Services, infrastructure and applications ▪ Facilitate automation and growth and realize economies of scale

Copyright © March 2026

Innovation/ differentiation	Important management objectives include: • APO02, APO04, APO05 • BAI08, BAI11	Important components: • Organizational structures ▪ Chief digital officer and/or chief innovation officer • Important influence of culture and behavior component for innovation
Cost leadership	Important governance and management objectives include: • EDM04 • APO06, APO10	Important components: • Skills and competencies ▪ Focus on IT costing and budgeting skills • Important influence of culture and behavior component • Services, infrastructure and applications component (e.g., for automation of controls, improving efficiency)
Client service/stability	Important governance and management objectives include: • EDM02 • APO08, APO09, APO11 • BAI04 • DSS02, DSS03, DSS04	Important component: • Important influence of culture and behavior component (client centricity)

Copyright © March 2026

2.2 Consider Enterprise Goals and Apply the COBIT Goals Cascade

(Design Factor 2)

Enterprise strategy diwujudkan dengan mencapai (seperangkat) *Enterprise Goals* .

COBIT® 2019 mendefinisikan 13 *Enterprise Goals*; setiap perusahaan harus memprioritaskan *Enterprise Goals* ini sesuai dengan *Enterprise strategy* .

Ref.	Enterprise Goal
EG01	Portfolio of competitive products and services
EG02	Managed business risk
EG03	Compliance with external laws and regulations
EG04	Quality of financial information
EG05	Customer-oriented service culture
EG06	Business-service continuity and availability
EG07	Quality of management information
EG08	Optimization of internal business process functionality
EG09	Optimization of business process costs
EG10	Staff skills, motivation and productivity
EG11	Compliance with internal policies
EG12	Managed digital transformation programs
EG13	Product and business innovation

Copyright © March 2026

Untuk menerjemahkan *Enterprise Goals* menjadi *governance and management objectives* yang dapat ditindaklanjuti:

1. Mulailah dengan menentukan *Enterprise Goals* terpenting bagi organisasi. Pilih tiga hingga lima *Enterprise Goals* terpenting; terlalu banyak tujuan prioritas tinggi akan menghasilkan hasil yang kurang bermakna.

2. Temukan *Enterprise Goals* yang diprioritaskan pada tabel pemetaan antara tujuan perusahaan dan tujuan penyelarasan (**Mapping Table—Enterprise Goals to Alignment Goals***). Gunakan pemetaan untuk menentukan tujuan penyelarasan terpenting.

3. Temukan tujuan penyelarasan yang diprioritaskan pada tabel pemetaan antara tujuan penyelarasan dan *governance and management objectives* (**Mapping Table—Alignment Goals to Governance and Management Objectives***). Pilih pemetaan *governance and management objectives* terpenting.

*) **Lihat Appendix B dan C pada COBIT® 2019 DESIGN GUIDE**

Copyright © March 2026

2.3 Consider the Risk Profile of the Enterprise (Design Factor 3)

Pada slide sebelumnya prioritas *Governance and Management* (*design Factor* 1) Perusahaan melakukan analisis resiko tingkat tinggi yang ada di Perusahaan dan resiko-resiko tersebut lalu dikategorikan.

Hasil analisis risiko diterjemahkan menjadi prioritas untuk tujuan *Governance and Management*.

Tabel pemetaan **Mapping Table—IT Risk to Governance and Management Objectives*** menghubungkan profil risiko perusahaan dengan tujuan *Governance and Management* serta prioritasnya, menggunakan teknik dan metode penilaian yang sama seperti yang dijelaskan sebelumnya.

*) **Lihat Appendix D pada COBIT® 2019 DESIGN GUIDE**

Copyright © March 2026

Contoh: Mapping Table—IT Risk to Governance and Management Objectives* mengilustrasikan bahwa jika skenario risiko TI kategori 1 (RISKCAT01) *IT investment decision making, portfolio definition & maintenance* yang menjadi focus resikonya, maka tujuan *Governance and Management* berikut akan menjadi penting:

- EDM01, EDM02, EDM04, EDM05
- APO05

*) **Lihat Appendix D pada COBIT® 2019 DESIGN GUIDE**

Copyright © March 2026

2.4 Consider Current I&T-Related Issues of the Enterprise (Design Factor 4)

Pada Langkah 1 (lihat Bagian 1.4 Current I&T-Related Issues), perusahaan melakukan *high-level diagnostic* terhadap isu-isu terkait TI yang dialaminya. Di sini, hasil diagnostik ini diterjemahkan menjadi prioritas untuk tujuan *Governance and Management*.

Seperti yang ditunjukkan pada **Mapping Table—I&T-Related Issues to Governance and Management Objectives***, setiap isu terkait TI dikaitkan dengan satu atau lebih tujuan *Governance and Management* yang dapat memengaruhi isu terkait TI tersebut.

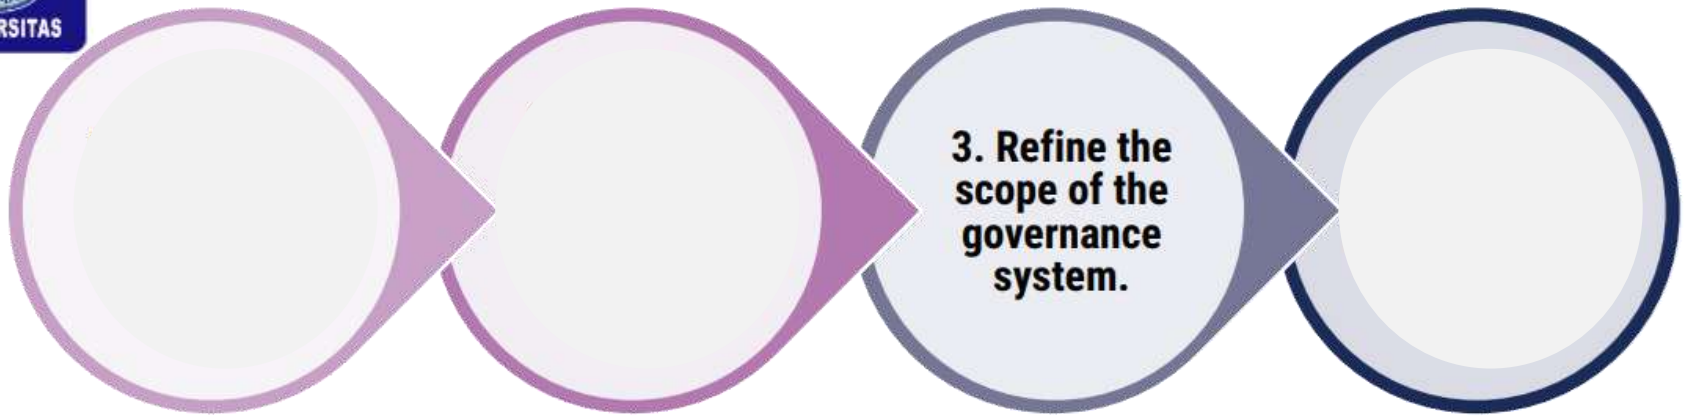

*) **Lihat Appendix E pada COBIT® 2019 DESIGN GUIDE**

Copyright © March 2026

Contoh: Ketika isu terkait TI, "*IT-enabled changes or projects frequently failing to meet business needs and delivered late or over budget*" menjadi perhatian, maka tujuan *Governance and Management* berikut ini penting:

- APO03
- BAI01, BAI02, BAI03, BAI05, BAI11

Copyright © March 2026

Refine the Scope of the Governance System

Memperbaiki Lingkup Sistem Tata Kelola

Copyright © March 2026

3. Refine the Scope of the Governance System

Langkah 3 mengidentifikasi penyempurnaan pada ruang lingkup awal sistem tata kelola, berdasarkan serangkaian faktor desain yang ada, tidak semua faktor desain mungkin berlaku untuk setiap perusahaan. Faktor yang tidak berlaku dapat diabaikan.

Pada langkah ini, perancang sistem tata kelola akan:

1. Menelusuri setiap *Design Factor*(DF) dari DF5 Lanskap ancaman hingga DF11 Ukuran perusahaan.

2. Menentukan apakah setiap *Design Factor* tersebut berlaku atau tidak.

3. Untuk menentukan *Design Factor* yang digunakan, tentukan nilai potensial mana—atau kombinasi nilai potensial mana—yang paling sesuai dengan perusahaan.

Copyright © March 2026

3.1 Consider the Threat Landscape (Design Factor 5)

Langkah-langkah berikut harus dilakukan ketika mempertimbangkan design factor ini adalah menentukan kombinasi nilai mana yang paling sesuai dengan situasi perusahaan saat ini, sesuai dengan entri yang ditentukan pada gambar.

Design Factor Value	Governance and Management Objectives Priority	Components	Focus Area Variants
High	Important governance and management objectives include: • EDM01, EDM03 • APO01, APO03, APO10, APO12, APO13, APO14 • BAI06, BAI10 • DSS02, DSS04, DSS05, DSS06 • MEA01, MEA03, MEA04	Important organizational structures include: • Security strategy committee • Chief information security officer (CISO) Important culture and behavior aspects include: • Security awareness Information flows include: • Security policy • Security strategy	Information security focus area*
Normal	• *As per the initial scope definition*	• *N/A*	COBIT core model

*At the time of publication of the *COBIT 2019 Design Guide: Designing an Information and Technology Governance Solution*, the information security focus area content was in development, and not yet released

Copyright © March 2026

3.2 Consider Compliance Requirements (Design Factor 6)

Langkah-langkah berikut harus dilakukan ketika mempertimbangkan design factor ini adalah Tentukan kombinasi nilai mana yang paling sesuai dengan situasi perusahaan saat ini, sesuai dengan entri yang ditentukan pada gambar

Design Factor Value	Governance and Management Objectives Priority	Components	Focus Area Variants
High	Important governance and management objectives include: • EDM01, EDM03 • APO12 • MEA03, MEA04	Importance of compliance function: • High relevance of documentation (information items) and policies and procedures	COBIT core model
Normal	• *As per the initial scope definition*	• *N/A*	COBIT core model
Low	• *As per the initial scope definition*	• *N/A*	COBIT core model

Copyright © March 2026

3.3 Consider the Role of IT (Design Factor 7)

Langkah-langkah berikut harus dilakukan ketika mempertimbangkan design factor ini adalah tentukan kombinasi nilai mana yang paling sesuai dengan situasi perusahaan saat ini, sesuai dengan entri yang telah ditentukan pada gambar.

Design Factor Value	Governance and Management Objectives Priority	Components	Focus Area Variants
Support	• *As per the initial scope definition*	• *N/A*	COBIT core model
Factory	Important governance and management objectives include: • EDM03 • DSS01, DSS02, DSS03, DSS04	• *N/A*	Information security focus area*
Turnaround	Important governance and management objectives include: • APO02, APO04 • BAI02, BAI03	• *N/A*	DevOps focus area*

*At the time of publication of the *COBIT 2019 Design Guide: Designing an Information and Technology Governance Solution*, the information Security, DevOps and digital transformation focus area content was in development, and not yet released

Copyright © March 2026

Design Factor Value	Governance and Management Objectives Priority	Components	Focus Area Variants
Strategic	Important governance and management objectives include: • EDM01, EDM02, EDM03 • APO02, APO04, APO05, APO12, APO13 • BAI02, BAI03 • DSS01, DSS02, DSS03, DSS04, DSS05	Typical bimodal components include: • Organizational structures ▪ Chief digital officer • Skills and competencies ▪ Staff who can work in an ambidextrous environment that combines both exploration and exploitation • Processes ▪ A portfolio and innovation process that integrates exploration and exploitation of digital transformation opportunities	Digital transformation focus area *

*At the time of publication of the *COBIT® 2019 Design Guide: Designing an Information and Technology Governance Solution*, the information Security, DevOps and digital transformation focus area content was in development, and not yet released

Copyright © March 2026

3.4 Consider the Sourcing Model for IT (Design Factor 8)

Langkah-langkah berikut harus dilakukan ketika mempertimbangkan *design factor* ini adalah tentukan kombinasi nilai mana yang paling sesuai dengan situasi perusahaan saat ini, sesuai dengan entri yang telah ditentukan pada gambar.

Design Factor Value	Governance and Management Objectives Priority	Components	Focus Area Variants
Outsourcing	Important management objectives include: • APO09, APO10 • MEA01	• *N/A*	Vendor management focus area
Cloud	Important management objectives include: • APO09, APO10 • MEA01	• *N/A*	Cloud focus area
Insourced	• *As per the initial scope definition*	• *N/A*	COBIT core model
Hybrid	*Combination of guidance for the three specific options*		

Copyright © March 2026

3.5 Consider IT Implementation Methods (Design Factor 9)

Langkah-langkah berikut harus dilakukan ketika mempertimbangkan *design factor* ini adalah tentukan kombinasi nilai mana yang paling sesuai dengan situasi perusahaan saat ini, sesuai dengan entri yang telah ditentukan pada gambar.

Design Factor Value	Governance and Management Objectives Priority	Components	Focus Area Variants
Agile	Important management objectives include: • BAI02, BAI03, BAI06	• Important and specific roles as identified in the Agile focus area guidance	Agile focus area
DevOps	Important management objectives include: • BAI03	• Important and specific roles as identified in the DevOps focus area guidance	DevOps focus area
Traditional	• *As per the initial scope definition*	• *N/A*	COBIT core model
Hybrid	*Combination of guidance for the three specific options*		

Copyright © March 2026

3.6 Consider the Technology Adoption Strategy (Design Factor 10)

Langkah-langkah berikut harus dilakukan ketika mempertimbangkan *design factor* ini adalah tentukan kombinasi nilai mana yang paling sesuai dengan situasi perusahaan saat ini, sesuai dengan entri yang telah ditentukan pada gambar.

Design Factor Value	Governance and Management Objectives Priority	Components	Focus Area Variants
First Mover	Important governance and management objectives include: • EDM01, EDM02 • APO02, APO04, APO05, APO08 • BAI01, BAI02, BAI03, BAI05, BAI07, BAI11 • MEA01	• *N/A*	DevOps focus area Digital transformation focus area
Follower	Important governance and management objectives include: • APO02, APO04 • BAI01	• *N/A*	COBIT core model
Slow Adopter	• *As per the initial scope definition*	• *N/A*	COBIT core model

Copyright © March 2026

3.7 Consider Enterprise Size (Design Factor 11)

Langkah-langkah berikut harus dilakukan ketika mempertimbangkan *design factor* ini adalah tentukan kombinasi nilai mana yang paling sesuai dengan situasi perusahaan saat ini, sesuai dengan entri yang telah ditentukan pada gambar.

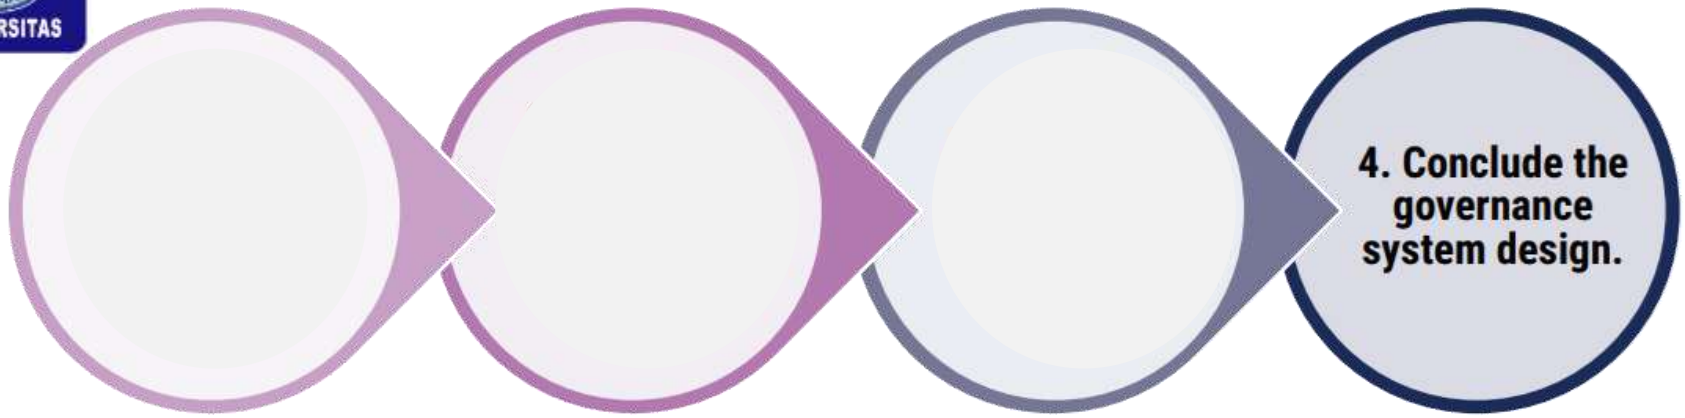

Design Factor Value	Governance and Management Objectives Priority	Components	Focus Area Variants
Large	• *As per the initial scope definition*	• *N/A*	COBIT core model
Small/Medium	• *As per the initial scope definition*	• *As applicable in the SME focus area description*	SME focus area[26]

Jika perusahaan tersebut adalah UKM (misalnya, memiliki 250 atau kurang karyawan tetap), perusahaan tersebut harus menggunakan panduan yang terdapat dalam *SME focus area* untuk desain sistem tata kelolanya.

Copyright © March 2026

Pada Langkah 3 ini, perusahaan akan mengidentifikasi serangkaian potensi perbaikan untuk sistem tata kelola awal dan menempatkan semuanya untuk dikonsolidasikan pada Langkah 4 dari *Governance System Design.*

Copyright © March 2026

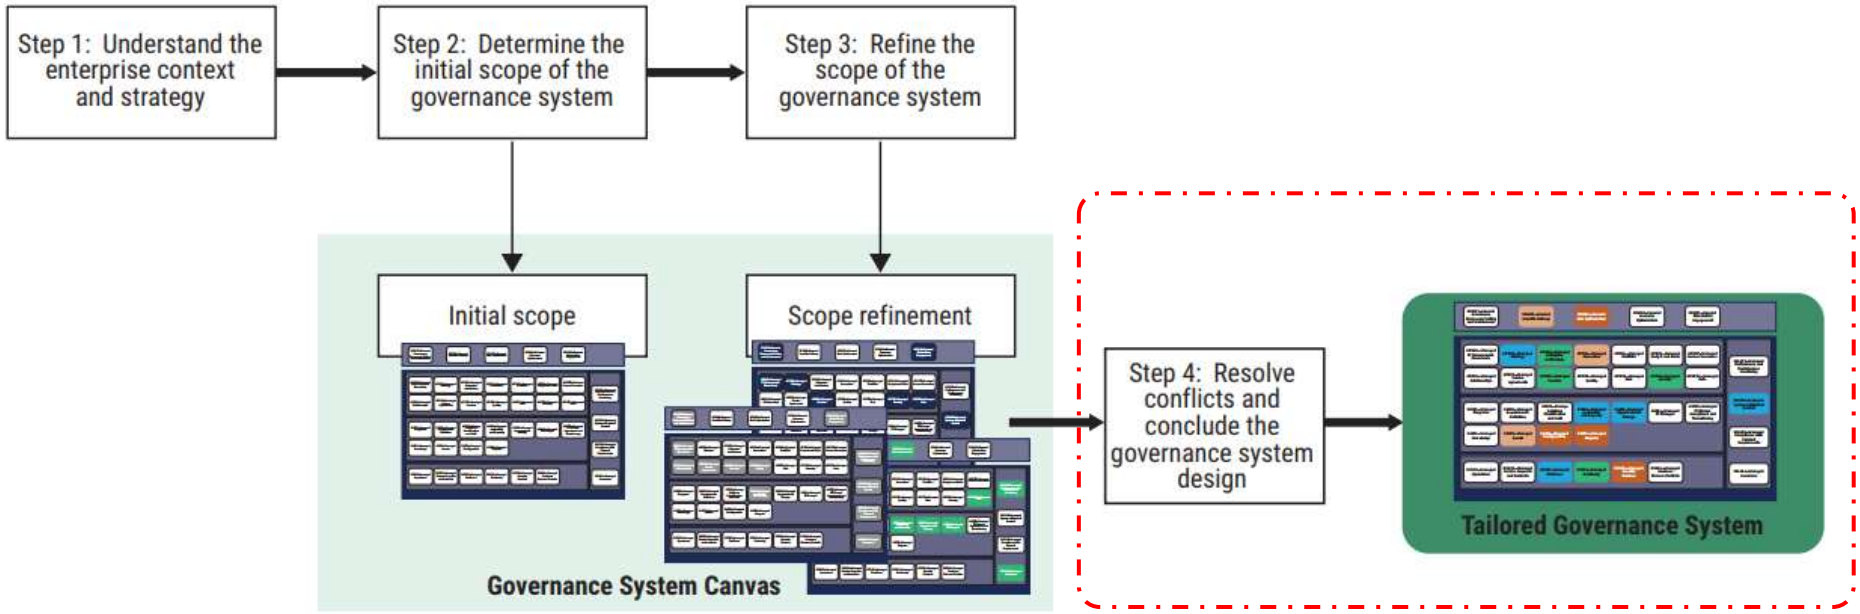

Conclude the governance system design

Menyimpulkan desain sistem tata kelola

Copyright © March 2026

Sebagai langkah terakhir dalam proses desain, Langkah 4 menyatukan semua masukan dari langkah-langkah sebelumnya untuk menyimpulkan *Governance System Design.* Sistem tata kelola yang dihasilkan harus mencerminkan pertimbangan yang cermat terhadap semua masukan—dengan memahami bahwa masukan-masukan ini terkadang dapat saling bertentangan.

Copyright © March 2026

4.1 Resolve Inherent Priority Conflicts

Workflow ini dapat diterapkan pada berbagai situasi, yang membutuhkan strategi berbeda untuk mencapai kesimpulan. Singkatnya, perusahaan perlu menganalisis data dan hasil setelah menerapkan faktor desain dalam konteks tujuannya untuk mengimplementasikan program tata kelola.

Jika perusahaan memiliki satu inisiatif penting yang berkelanjutan (misalnya, investasi besar dalam aplikasi perusahaan, program transformasi digital, dll.) atau ingin fokus pada topik atau masalah yang sangat spesifik (misalnya, menyelesaikan masalah keamanan, mengadopsi pendekatan DevOps, menyesuaikan diri dengan dan mematuhi peraturan privasi baru, dll.), perusahaan tidak perlu menerapkan semua langkah dalam *Workflow* secara detail, tetapi dapat fokus pada area minat tertentu saja.

Copyright © March 2026

Contoh:

Dalam hal investasi pengembangan yang penting, perusahaan dapat mempertimbangkan strategi perusahaannya (faktor desain1) sebagai strategi inovasi/diferensiasi, dan karenanya memutuskan untuk hanya mengerjakan tujuan tata kelola dan manajemen yang ditekankan untuk faktor desain ini.

Dalam hal peraturan privasi yang baru, suatu perusahaan dapat fokus pada tujuan tata kelola dan manajemen yang sesuai dengan persyaratan kepatuhan tinggi (DF6). Tujuan-tujuan tersebut diantaranya: EDM01 *Ensured governance framework setting and maintenance*, EDM03 *Ensured risk optimization*, APO12 *Managed risk*, MEA03 *Managed compliance with external requirements* dan MEA04 *Managed assurance*.

Maka perusahaan boleh fokus pada tujuan *Governance and Management* saja, berdasarkan hasil analisis persyaratan kepatuhan yang bersesuaian dengan MEA03.

Copyright © March 2026

Saat menentukan desain sistem tata kelola, perusahaan harus meninjau tujuan tata kelola dan manajemennya, dan menganalisis tingkat kinerja saat ini (capability levels). Perusahaan kemudian harus mempertimbangkan hasil penilaian saat ini (current capability level) untuk menentukan road map sistem tata kelola yang ditargetkan, yaitu dengan terlebih dahulu mencari solusi cepat (diantaranya, kebijakan yang membutuhkan daya minimal, tetapi menghasilkan manfaat tinggi).

Copyright © March 2026

Hasil dari langkah terakhir dalam *Governance System Design workflow* adalah sistem tata kelola yang dirancang dengan baik.

Namun, sistem tata kelola pada dasarnya bersifat dinamis. Strategi dapat berubah, program investasi penting diluncurkan, lanskap ancaman berubah, teknologi berubah, dan sebagainya. Ini berarti bahwa **sistem tata kelola harus ditinjau secara berkala**, dan perubahan pada sistem harus dilakukan jika diperlukan.

Copyright © March 2026
